

PRESS RELEASE

Lamborghini Spark: strength, versatility, style.

Serralunga d'Alba, 2nd October 2013; Lamborghini Trattori now includes the Spark range, a new medium-high power series for the most diverse agricultural applications. Tractors from 120 Hp to 190 Hp, four or six cylinders, Powershift or continuously variable transmission, with a wide choice of models and versions that are suited to a whole host of work from ploughing to sowing, from crop treatment to harvesting and from road transport to general farm work.

The unique and original style is by Giugiaro Design. The low aggressive profile and rounded bodywork reaffirm the strong personality of Lamborghini Trattori. Innovative tractors that stand out for their unmistakable elegance and high performance in the field and on the road.

The Spark range stands out for the breadth of the range on offer. Five four-cylinder models up to 160 horsepower, with a short wheelbase, especially suited to general farm work and transport offering versatility and a high power to weight ratio. There are also Four six-cylinder models up to 190 horsepower offering higher traction force and therefore ideal for all arable and tillage applications

All models can count on exceptional performance and reduced consumption from the 4.0 or 6.1 litre Deutz Tier 4i engine which are able to ensure significant levels of power and torque over a wide range of rpm. Four valves per cylinder, turbocharger with intercooler and wastegate, integrated electronic control of the DCR (Deutz Common Rail) injection system and SCR technology: a formidable combination that allows the engine to provide maximum performance under any conditions.

The version with VRT continuously variable transmission ensures absolute versatility and performance and, together with the MaxiVision cab, represents a point of reference for Lamborghini in terms of comfort and ergonomics for top-of-the-range models. The models with Powershift transmission can count on as many as 32/32 FWD/REV gears, with 48/48 as an option. All Powershift models are fitted with the renowned S Class2 cab, available in Basic and Hi-Profile versions.

The versatility of the range is enhanced by the standard availability of four PTO speeds, including 540 ECO and 1,000 ECO. Electrohydraulic engagement is standard and accompanied by gradual and progressive start up of attached equipment.

Traction is optimised to ensure the best possible control of the tractor when ploughing and optimal manoeuvrability during road transport, the ASM function of the electronic control unit selects or deselects four-wheel drive and locks or unlocks the differentials according to speed and steering angle.

The basic hydraulic system includes an 83 l/min fixed displacement pump (as an option a 120 l/min Load-Sensing pump is available), plus an independent power steering pump. All models are available with four mechanical distributors in the basic version and up to seven electronic distributors in the VRT version. The rear linkage has a lifting capacity of 6,200 kg or 9,200 kg, 3,800 kg or 4,000 kg for the optional front lift.

On request the cab can be fitted with mechanical or pneumatic suspension; the complete package transforms the cab into a workspace of exceptional comfort, also available with a 12.8" touchscreen monitor (i-Monitor 2.0), an Agrosky GPS navigation system and the ComforTip headland management system.

With the introduction of the Spark series, the new Lamborghini range offers advanced technological solutions, comfort and style in the 120 Hp to 190 Hp segment. A great step forward for the raging bull brand.
